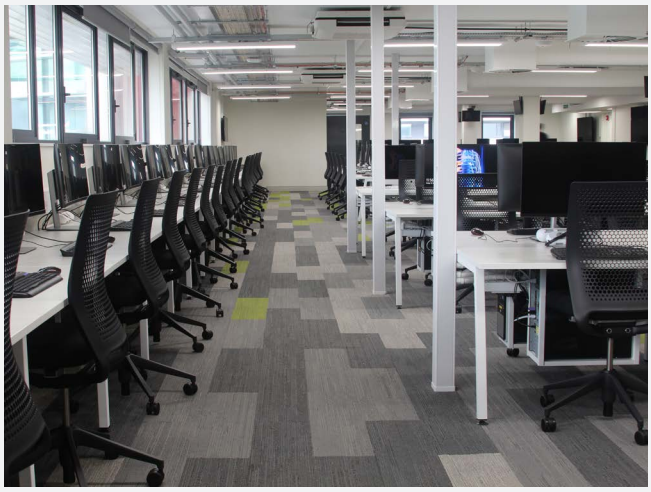
CASE STUDY

Building 59.

About the project.

The project consisted a refurbishment and reconfiguration of existing electronic laboratories and offices to Level 2 and 3 of Building 59 University of Southampton.



The works included the installation of new mechanical and electrical services and data, new walls and ceilings and floor finishes and the adaptation of existing teaching space.

B59 is a good example of a short duration programme which was met, despite many variations.

Working in a live environment, Phase 1 was handed over early.
