CASE STUDY

Premier Inn Hotel.

About the project.

This development comprised the design and construction of a new four-storey, 83 bed Premier Inn Hotel, in Ringwood.

Following ground improvements, the foundations comprised RC pad and strip with below ground blockwork to a beam and block ground floor. The ground floor communal area superstructure was steel frame and the main building, timber frame with a lightweight composite panel roof.

The works included fit-out of the bedrooms, the restaurant and kitchen areas.

The external envelope comprised a mix of cladding, brickwork and aluminium curtain walling. Two passenger lifts together with mechanical and electrical installations completed the internal elements.

The external works included car parking, delivery areas together with hard and soft landscaping.

“On behalf of Paul and I, we wanted to thank you so much for the professional approach you have adopted throughout the above-mentioned project.

It has been a pleasure working with you, seeking your guidance and patience at times, and above all making it all happen in the guidelines issued.

You are a great asset to the Brymor Construction Company.”

Andy Collins, Commercial Director, GP Commercial Investments Limited
