## About the project.

We were pleased to have worked alongside Wavin UK Ltd to deliver a three bay extension to their existing factory of approximately 6,150m<sup>2</sup> floor area to increase production capacity.

Works included:

- Demolition and relocation of existing structures
- Associated drainage and external works
- Construction of a portal steel frame
- Extension to an additional warehouse

The key advantages for Wavin were:

- Maintaining Wavin's core operations
- Coordination and management of Wavin's direct subcontractors
- M&E co-ordination

Being a design and build project, working closely with the design team was critical.

Our in-house managers worked very hard alongside the designer to ensure this project had the very best end results on time and to budget.
